                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising administering a positive or negative regulator of cell-death cinhibitory-factor. The invention also comprises a method for screening combinistory factor. The invention also comprises a method for screening combinators of cell-death, by contacting cells expressing cell-death combinitory factor with a candidate compound, monitoring level of cexpression of cell-death inhibitory factor, evaluating cell-death combinity compounds and cell-death compound based on change in the level of cexpression of the factor and selecting compounds having cell-death modulation ability. The cell death regulator of the invention may have cardiant, neuroprotective, anti-HIV, antiinflammatory, cerebroprotective, compatitoropic, cytostatic, immunosuppressive, antirheumatic, hepatitoropic, cytostatic, immunosuppressive, antirheumatic, cophthalmological, nootropic, antiparkinsonia, antirconvulsant, hypotensive, antiarteriosclerotic, haemostatic, antialcoholic and covirucide activities. The method of the invention is useful for treating HIV, cardiac disease, immunological diseases, neurodegenerative disease, compatic disorder, acute pancreatic inflammation, and cancer, AIDS, autoimmune diseases, rheumatism, Crohn's diseases, hypertension, carebral disease, Parkinson's disease, Huntington's disease, hypertension, cerebral trauma, cerebral infarction, cerebral haemorrhage, hepatitis, alcoholic hepatitis, and cerebral ischemia. The present sequence represents the DNA sequence encoding the rat cell death inhibitory protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

```
cc sequences. (I) is useful as hybridisation probes, polymerase chain creaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cc questivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal cc question for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food golypeptide in tissue, as molecular weight markers and as a food golypeptide in tissue, as molecular weight markers and as a food golypeptide and polynucleotide sequences have useful in medical imaging complement. (II) and its binding partners are useful in medical imaging complements. (II) and (II) are useful for treating disorders convolving aberrant protein expression or biological activity. The complement of the protein expression or biological activity. The complement of the complement of the responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence is the entire insert of clone RP5-1103G7 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the
                                                                                                                                                                                                                                                                    region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                _region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sanger Centre Chromosome 20 Mapping Group. This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. Each CDS has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion (ITM) cloning system between the SalI and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after SalI site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Park,J., Rolfs,A., Hu,Y., Shen,B., Vannberg,F., Moreira,D., Kelley,T., Zuo,D., Raphael,J., Baqui,M., Jepson,D., Harlow,E., LaBaer,J. and Brizuela,L.
